```

```
* Returns a list of methods for the specified object.
* The methods must start with "get" and have no arguments.
* The method getClass is not returned.
* If the object implements GetMethodsTolgnore then these methods are ignored as well.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          List methodsTolgnore = null;
